

Abstract of the Disclosure

A pluggable server module (PSM) for remote controlling of a device is provided. The PSM includes a wireless transceiver, a server remote control logic and a standardized interface and connector. The wireless transceiver is connected to the computing part. The computing part is connected to the server remote control logic, and the server remote control logic is connected to the standardized interface and the connector. In use the PSM is plugged into a device to be controlled via a standard interface and connector.
